VSB TECHNICAL UNIVERSITY OF OSTRAVA | FACULTY OF SAFETY ENGINEERING

Safety and Security

Generated: 25. 4. 2025

Faculty	Faculty of Safety Engineering
Type of study	Bachelor
Language of instruction	English
Code of the programme	B1032A020013
Title of the programme	Safety and Security
Regular period of the study	3 years
Coordinating department	Department of Occupational and Process Safety
Coordinator	Ing. Petr Lepík, Ph.D.
Key words	Managerial skills, Fire Safety, Safety and Security, Enviromental Protection, Occupational and process safety

About study programme

The Safety and Security degree programme focuses on health, safety and environment, industrial safety, fire protection, crisis management, security and management skills. The aim of the study programme is to prepare professionals capable of taking technical and organisational measures aimed at protecting against risks arising from business-related activities, but also against external influences of an intentional and unintentional nature. The graduate will be able to apply as an expert in complex security solutions, especially in the field of industry, but also in state organizations.
The programme broadly precedes the HSE Professional programme, which can be followed up in the Master's programme.

Professions

- Physical Security Training Specialist
- Emergency Planning/Management Officer
- Crisis Manager
- Industrial Security Specialist
- Corporate Security Specialist

Hard skills

- Emergency committees
- Security of persons and property
- Technical safety
- Security design
- Technical means of security
- Emergency management
- Management of major accidents
- Risk identification
- Objects protection
- Crisis management
- Creation of security plans
- Physical security
- A risk assessment in physical security
- Security and fire protection systems

Graduate's employment

The student will find employment in both the public and private sectors, where there is a requirement for a worker capable of organizing and providing an appropriate level of security:
- The graduate is an expert in the field of occupational safety, fire protection, and safety management
- He is prepared for positions in the field of safety in national and multinational companies (in small, medium and large enterprises, state and private business organizations) where there is a requirement to be involved in safety management.

Study aims

The study program responds to the growing demand for professionals who are able to organize and manage systems related to security operations and the protection of people throughout human life. Activities. The aim of the proposed study program is to prepare professionals who are able to take technical and organizational measures to protect against risks arising from business-related activities. activities, but also from external influences of an intentional and unintentional nature. The study focuses on industrial safety, in particular occupational health, fire protection, and the protection and safety of the enterprise. Upon completion of the course, the student will be able to work as a professional in the field of complex safety solutions, especially in the area of industry, but also in government organizations.

Graduate's knowledge

Upon completion of the Safety and Security (SaS) program, the student will be able to demonstrate the following knowledge:
- Demonstrate knowledge of security policy, describe, declare and explain how security can be ensured while maintaining the continuity of the organization's operations.
- Demonstrate knowledge and understanding of the links in complex security based on the ability to analyze and identify risks.
- Understand the complexity of working conditions, process safety, and continuity of operations of an organization and have the ability to relate health and safety, socio-economic, political, physical, and environmental vulnerabilities.

Graduate's skills

Upon completion of the SaS program, the student will be able to:
- Design measures and procedures for incident prevention, taking into account technical, ethical and social problems.
- Implement measures and activities aimed at reducing risk.
- Apply adequate methods to theoretical and practical problems in the field of security policy based on scientific approaches and modern practice.
- Identify risks and propose adequate prevention and risk reduction based on evidence.
- Participate in the resolution of accidents and incidents and implement the results obtained from investigations.

Graduate's general competence

- He/she is able to use inductive methods of reasoning, interpretation of results based on limited information and which he/she is able to generalize for the needs of solving specific problems and tasks.
- Is capable of deductive reasoning in order to specify solutions based on general information about the problem.
- Able to communicate effectively with security, planning, and operations stakeholders (including public authorities and local government).
- Proficient in communication techniques - presentations, self-presentation, interviewing, and conducting meetings.
- Is familiar with Internet resources for educational purposes, using advanced modern communication technologies. Is naturally connected to the professional community and ready to share information with the professional public.
